To install the K&N air-box conversion kit, first remove seat of the cycle and raise the gas tank. Now remove the stock cover and air filter. Then pry the stock retaining clips from the air-box with a large flat head screwdriver. Install the air filter and place the metal retaining ring around the filter. Take the clips supplied with the kit and install them as shown in figure one.

Figure one.

Check that all 4 clips are secured and lower the tank and replace the seat.
