

Side-stand conversion

The following is instructions to replace the stock auto retracting side-stand spring bracket to the Fast by Ferracci manual retracting bracket.

Fast By Ferracci Inc
1901 Davisvil I Rd
Wil I ow Grove PA 19090
Tel (215) 657 1276

Parts included: One spring bracket.

Tools needed: One vice grip

Procedure:

1. Since the side-stand must be retracted during the entire procedure, the first step is to secure the bike in the upright position using a rear wheel stand (FBF p.n. F94550) or equivalent.
2. After the bike is secure and the side-stand is in the upright position remove the left faring.
3. One spring at a time, use the vice grip to grab the end of spring furthest from the engine and pull out until the spring can clear the hook on the side-stand. Repeat for the second spring.
4. Remove both springs from the existing spring bracket and remove bracket from bike.
5. Determine the big hole on the new Ferracci bracket. Slide the bracket (big hole side) onto the stud on the side stand support as seen in Figure1. It may take some wiggling at the proper angle to achieve penetration.
6. Replace both springs on the new bracket.
7. Now grab the inner spring with the vice grips and slip it over the hook on the side stand. Repeat for the outer spring.
8. Check for proper operation.
